

## Space-arm Dual

Modern modular monitor arm

The Space-arm Dual uses the same Hub as the Space-arm Single, but features two or more arms.

As with the Space-Arm Single and Beam Dual, this monitor arm can be adjusted to the right height quickly and easily, so this arm is extremely well-suited to flexwork stations.

An ergonomically correct monitor position leads to reduced discomfort and complaints to the neck (Kumar 1994 McKinnon 1994, Marcus2002). The optimum position increases productivity by 10% (Sommerich et al, 1998). A relatively large viewing distance is less straining to the eyes, an arms length is recommended. A condition of this is that the characters on screen must be large enough to read easily (Owens and Wolf Kelly 1987). Larger characters can be read quicker than small ones (Tullis et al, 1995), small characters therefore decrease productivity (Jaschinski-Kruza, 1988).

### Modular, two screens & modern design

The Space-Arm Dual has the same base as the Space-Arm Single, but it is expanded with two arms for two monitors. Using a monitor arm is important, because an optimal monitor position is much more comfortable to work with and increases productivity by 10% compared to the wrong position (Sommerich et al., 1998). Placing the monitor too low can cause more neck strain. Placing it too high (the top certainly should not be above eye level) can also cause problems. Probably even more important is adjustment of the depth, which allows for an ideal viewing distance at all times. This helps you absorb information better and causes the least eye strain.

## Benefits

### Simple

The monitor arm is adjustable thanks to its gas spring mechanism. It is ideally suited for flex workspaces.

### Mounting

There are countless attachment options available, so the Space-Arm Dual can be mounted on any vertical or horizontal surface, including most panel systems for office furniture.

### Modular

This monitor arm can be expanded from one to several screens (maximum 8).

### Clean Desk

Because your monitor no longer sits on your desk but is attached to the arm, you free up workspace.

### Ergonomic

A monitor arm gives you the right ergonomic position, improving your back and neck posture and reducing eye strain.

### Quick Change

The quick exchange vesa option makes switching monitors quick and easy.
